

# More Efficient. More Reliable. **More Savings.**

Life in the maritime industry is full of unique challenges. Congested satellite connections often hinder effective safety services and operational communications between remote personnel and the corporate office. The demand for more bandwidth increases as the need to send and receive vital data from anywhere in the world becomes more important. Given the costs and limitations of satellite connections, it's critical to optimize traffic and utilize the entire capacity of the link.

We offer a cost-effective bandwidth optimization solution that is flexible and improves any existing connection without changing infrastructure or adding expensive equipment. Our solution accelerates and enhances the Internet, key business applications, access to corporate resources, and communication methods needed for real-time collaboration.

## We cracked the code

- Cloud-based subscription model
- Scalable for any size operation or agency
- Fully managed service
- VPN over satellite, microwave, 3G/4G, and other high-latency links without performance penalty
- Works with any end user device: PCs, laptops, tablets, smartphones
- Private server options available
- Fast, easy setup

## Compatible with all technologies

- Satellite
- Cellular
- Wi-Fi/WiMAX/Microwave
